 214cm x 214 cm

 SAS-2424
 244cm x 244 cm

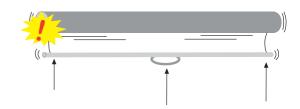

Black Borders, Video Format (4:3) and HDTV Format (16:9) also available.

Common problems associated with normal manual screen.

When pulled down, normal manual screen cannot stop at your desired position due to poor stopping mechanism, causing frustration to the user. Damages of the screen is inevitable if too much force is used to pull down the screen.

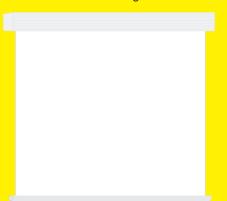

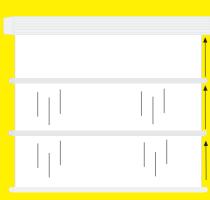

When rolled up, normal manual screen either jammed or rolled up too fast, causing a loud impact when the bottom bar hit the frame. This will cause damages to the screen too!

THE SOLUTION!

Auto-Gear Mechanism is an innovative designed gear system that stop at your desired position when pulled down and released. To roll up, just pulled down slightly and release, the unique Auto-Gear Mechanism will wind the screen up slowly and smoothly just like a motorized screen. Simple as that, no more hassle and damage to the screen.

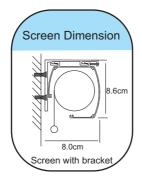

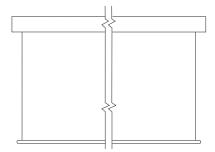

Easy Horizontal Alignment

Screen can be adjusted horizontally even after installation. This is very useful function especially when you need to align screen to suit your projection image.

Screen Casing Width = Screen Width + 6cm
Screen Casing Width = Screen Width + 6.5cm (SAS-2121)
Screen Casing Width = Screen Width + 7.2cm (SAS-2424)
